

Extender

“A cost-effective way to configure, customize and extend Sage 300”

Why use Extender?

- Customize Sage 300 without complex code
- All configurations and scripts stored securely in your Sage 300 database
- Easy to upgrade, no need to recompile your customizations
- Works with all Sage 300 core modules, plus 3rd Party modules developed in the SDK

Extender Configurator

The Configurator edition lets you tailor Sage 300 without writing a single line of code.

Alerts and Notifications

Configure Extender to monitor selected fields. When changes occur, trigger real-time email alerts, or display details on Sage 300 screens using Orchid Notes.

Logging

Create an audit trail of key changes to the Sage 300 database. Log what changed, when it changed, who made the change. Access logs using context-sensitive screen icons.

Integration

Synchronize between systems more efficiently by calling external programs when changes occur within Sage 300.

Workflow

Add consistency and transparency to approvals and other critical business processes with structured workflows. Pre-defined Workflow Actions cater for common business scenarios. Monitor and manage progress with the Workflow Console.

 Let remote workers participate in workflows with Remote Action Service and/or the Workflow Anywhere mobile App.

The screenshot displays three overlapping windows from the ORCEWF - Extender application:

- ORCEWF - A/R Customers:** Shows customer details for 'BARMART' (Bargain Mart Stores Inc.). The 'Credit Bureau Information' section shows a credit limit of 40,000.00, which is circled in orange.
- ORCEWF - Extender Log:** A table showing recent changes. The last entry shows a change to the 'AMTCLIMIT' field from 55000.00 to 35000.00 on 8/02/2021 by user NATHALIE.
- ORCEWF - Extender Workflow Console:** A table of workflow instances. The last entry shows a workflow for 'Update to the customer's record' completed on 11/02/2021 by user ANNE.
- Email Notification:** A screenshot of an email with the subject 'Customer BARMART Bargain Mart Stores Inc. credit limit has changed'. The body text states: 'The change was done by ANNE doing an Update to the customer's record. The change was done on 11/02/2021 at 17:59:37'.

Orange arrows indicate the flow of information: from the customer record change in the main Sage 300 window to the Extender Log, then to the Extender Workflow Console, and finally to the email notification.

Customer Credit Limit change triggers email, Extender Log entry and Extender Workflow instance

Work *smarter* with Orchid

Extender Developer

The Developer edition includes all the Configurator features, while also letting you take customization of Sage 300 to the next level using Python scripts.

Business Logic (Sage 300 Views)

Introduce custom validations, conditional alerting, or automate business processes.

Screen Customizations

Modify existing screens in ways not possible at the View level (e.g. tailor tabs, fields, buttons, and finders). Create new screens without the need for complicated programming.

Custom Tables

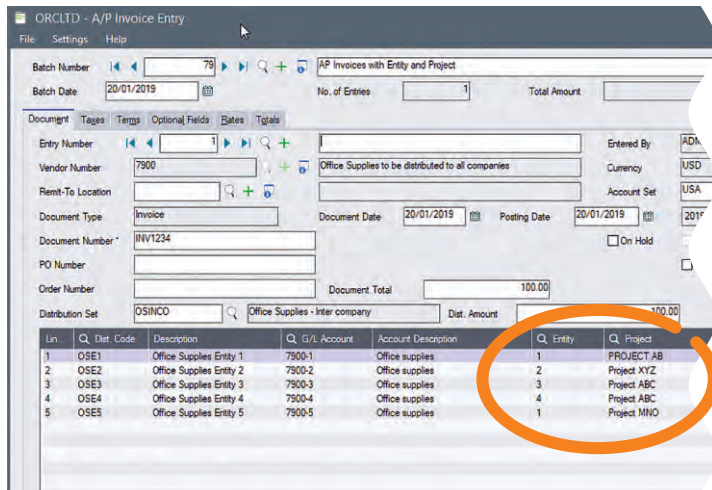

Create Sage 300 Views and associated tables, without coding. These form part of the Sage 300 database and database dictionary, so they can be accessed, dumped and loaded just like any other view.

Advanced Workflow

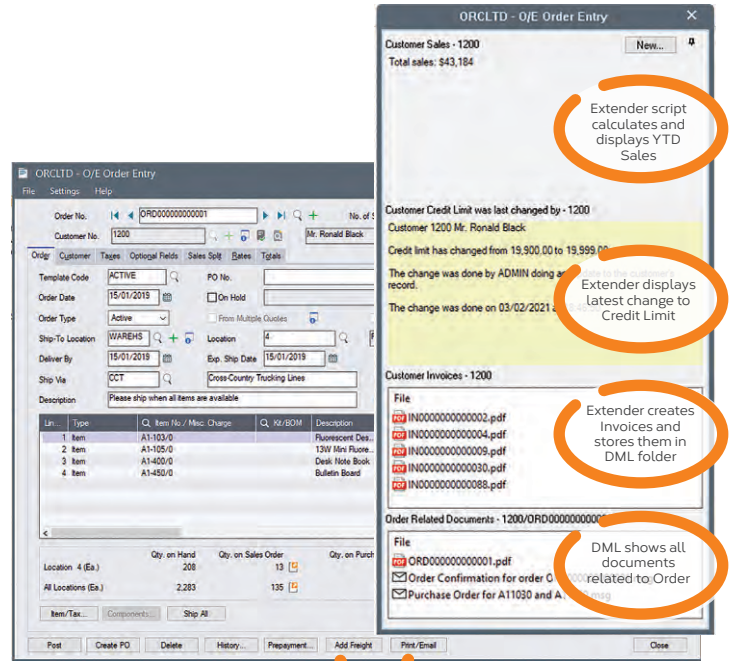

Develop custom Workflow Actions using Python to complement our pre-defined actions. Incorporate Custom View/Table data into Workflow Actions.

Advanced Integration

Eg. integrate Sage 300 with cloud-based collaboration tools, or send shipment details to the warehouse when an order is placed.

Screen Customization with Optional Fields (Entity & Project) added to the AP Invoice Detail grid

Extender adds custom buttons to Order Entry screen, and uses Orchid Notes and Document Management Link (DML) to display relevant data and files

Combine Extender Developer and Orchid Notes to generate dynamic, feature-rich 'Extended Notes'.

Why Python?

Python is a widely used, open-source language that consistently tops "most popular language" industry surveys. We chose it as the scripting language for Extender because:

- It is an interpreted language (no compiler needed)
- Customization scripts can be stored in the Sage 300 company database
- Source code is self-documenting, and can be amended on site
- It supports the use of thousands of well-tested, open-source libraries

More information

Further information about Extender, including videos, is available from Orchid's Website: www.orchid.systems/products/extender.

Minimum Requirements

Extender requires the compatible version of Sage 300 System Manager. Workflow User licences are required to access Extender Workflow functionality. Notes functionality requires Orchid Notes. Document Management Link is required to display documents. Python is installed as part of Extender.
