

TeamWork for Sage 300

Sage Tech Partner

“Mobile, chat-based collaboration and management for Sage 300”

What is it?

TeamWork provides a new way for teams to work together, with conversations and actions shared across mobile devices and Sage 300 screens.

TeamWork integrates AutoSimply's AC Chat mobile app with Orchid's workflow and collaboration capability, supported by easy-to-use templates and configuration tools. It:

- Offers configurable notification and approval workflows for Sage 300 transactions, supported by a chat interface.
- Includes a made-for-mobile app version of Orchid's Extender Workflow Console, with the added chat functionality.
- Provides a versatile alternative for communicating about Sage 300 transactions and masterfiles, as well as monitoring and actioning your workflow tasks in Sage 300.

App-based Approval with associated Chat

- Provides visibility of chats between non-Sage users on Sage 300 screens.
- Can be combined with Orchid Document Management Link to link to relevant documents from Sage 300.

Why use it?

- Real-time communication: users can discuss Sage 300 transactions instantly, reducing delays in approvals or updates.
- Improved collaboration: teams across different departments can coordinate efficiently in a single chat platform, reducing the need for back-and-forth emails.
- Better tracking and documentation: conversations can be logged in a structured way, and referenced later, to track decisions related to Sage 300 transactions.
- Remote accessibility: Employees can access updates from anywhere, via mobile or desktop chat apps or in Sage 300 screens.

About the Mobile App

AutoSimply Chat (aka AC Chat) is available on your mobile device's app store. When used as part of TeamWork, it includes both a chat interface and workflow functionality (a streamlined alternative to the desktop version of the Orchid Extender Workflow Console).

Configurable Workflows

Choose from 25+ Workflow Templates, covering common Sage 300 approval and/or notification scenarios. Use the Workflow Rules Engine to tailor them to your needs. You decide:

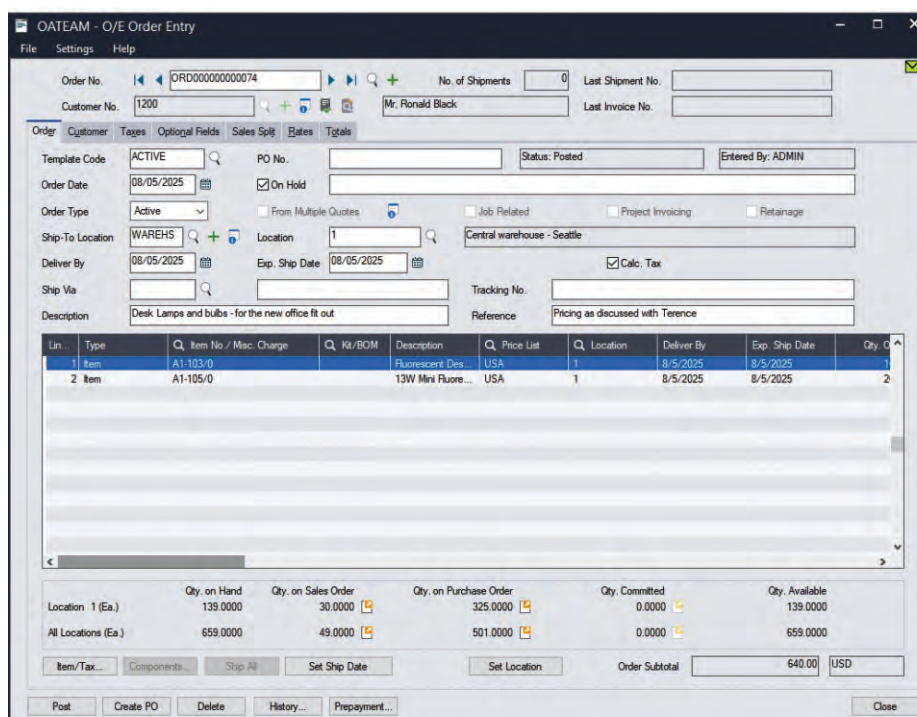

- WHAT needs to be approved (related to Sage 300 records).
- HOW to determine if approval is required (conditions).
- WHO approves (up to 5 approvers, sequential or parallel).

 TeamWork is a very impressive tool, with the way it brings all the information into one place. There is a definite need for it.

MARCO POMPONI, GENATEC, CANADA

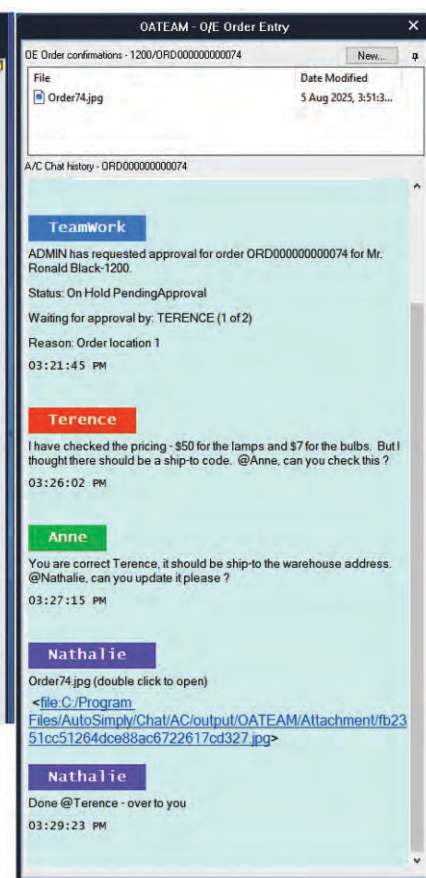

Use Case examples

- Sales Operation team updates Sales Order status, and warehouse personnel update pick status.
- Drivers update shipment status and save proof of delivery images, automatically triggering invoicing.
- Customer, Vendor, and Item feedback is entered by and shared between sales, purchasing, and warehouse personnel.
- Request I/C stock usage or I/C Transfer from a chat without logging into Sage 300.
- Approve a Customer credit limit change.
- Request creation of a new G/L account.
- Request and approve a purchase requisition.

The screenshot shows the Sage 300 O/E Order Entry window. It includes fields for Order No. (ORD000000000074), Customer No. (1200), and various order details. A table lists items: 1 Item (A1-103/0) and 2 Item (A1-105/0). The bottom section shows inventory quantities for Location 1 (Ea.) and All Locations (Ea.).

Sage 300 Order Entry screen with related Chat log

The screenshot shows a TeamWork chat log for order ORD0000000000074. It includes messages from ADMIN, Terence, Anne, and Nathalie, discussing the order status and pricing.

Minimum Requirements

TeamWork works in conjunction with (and requires) Sage 300, AutoSimply Chat, Orchid Notes, and the workflow capability provided by Orchid Extender (Developer edition, or Runtime if no other Extender features are being used). See the Orchid website for detailed requirements.

More information

Further information about TeamWork, including videos, is available from AutoSimply and/or Orchid's Website: www.orchid.systems
